INCIDENT ANALYSIS & RESPONSE REPORT

Security Operations Center • SOAR Automated Response Verification

INCIDENT TICKET	DETECTION / CONTAINMENT	SEVERITY / CLASSIFICATION
INC0010003	**2026-10-15**	Critical (P1) True Positive

INCIDENT STATUS	TARGET ENDPOINT	PRIMARY THREAT
Contained & Escalated	**corp-windows-client01**	**MyDFIR-HackTool-Lazagne(SOAR-EDR)**

1. Executive Summary

On **October 15, 2026**, a Critical-severity security incident was triggered by an elevated execution of a credential-dumping hacktool identified as **MyDFIR-HackTool-Lazagne(SOAR-EDR)** (`LaZagne.exe`) on the affected asset `corp-windows-client01.ap-southeast-2.compute.internal`. The incident was detected via custom LimaCharlie EDR Detection & Response (D&R) telemetry and routed into a Tines 3B SOAR workflow. VirusTotal intelligence enrichment confirmed a signature reputation score of **46/72 malicious vendors**. After inspecting the detection in LimaCharlie and reviewing the log, the analyst initiated emergency containment via the Human-in-the-Loop (HITL) approval gate, resulting in immediate host network isolation and process kill API tasking. The incident was logged in ServiceNow under **INC0010003** and escalated for L2 verification with work note: `Verify containment and process termination`.

2. Affected Asset & Incident Metadata

Attribute	Telemetry Details
Affected Asset (Host)	`corp-windows-client01.ap-southeast-2.compute.internal`
Execution Command	`LaZagne.exe all`
Detection Rule / Engine	LimaCharlie EDR (Rule: `MyDFIR-HackTool-Lazagne(SOAR-EDR)`)
VirusTotal Threat Ratio	**46 / 72** Engines (High Confidence Malicious)
MITRE ATT&CK	Credential Access (TA0006) | Credentials from Password Stores (T1555)

3. Indicators of Compromise (IOCs)

Confirmed Threat Indicators

Threat Identifier: `MyDFIR-HackTool-Lazagne(SOAR-EDR)`
Executable Payload: `LaZagne.exe` (Credential Dumper)
Execution Command: `LaZagne.exe all`
Reputation Metrics: 46 positive engine hits on VirusTotal lookup

(Note: `corp-windows-client01` is categorized as the Affected Asset, not an IOC).

4. Triage & Response Workflow

- **Alert Ingestion & Threat Intel Enrichment:** Execution of `LaZagne.exe` fired the `MyDFIR-HackTool-Lazagne(SOAR-EDR)` D&R rule. Tines 3B ingested the detection payload, parsed the executable hash, and queried VirusTotal API, yielding a 46/72 malicious score. Multi-channel notifications were dispatched to Slack and Gmail.
- **Analyst Triage & Log Verification:** The SOC analyst checked the *LimaCharlie Detections* tab to confirm the alert parameter and verify it was a genuine event, confirming execution under `Administrator` context on `corp-windows-client01`.
- **Human-in-the-Loop (HITL) Containment Decision:** The analyst interacted with the secure Tines approval form and selected **Yes (Approve Containment)**.
- **Automated Endpoint Tasking:** LimaCharlie REST API executed immediate host network isolation (`network_isolated: true`) and issued a process termination command against active `LaZagne.exe` threads.
- **ServiceNow ITSM Escalation:** Ticket **INC0010003** was updated with Short Description: *"MyDFIR-HackTool-Lazagne(SOAR-EDR) detected - Ticket INC0010003"* and work note: `Verify containment and process termination`.

5. Post-Containment Verification Status

Verification Metric	Observed State
Host Network Status	**Isolated** (Confirmed in LimaCharlie sensor state: `network_isolated: true`)
Process Termination	Kill command issued via LimaCharlie API tasking; active process terminated
ServiceNow Audit Trail	Ticket state set to **Escalated** with work note: `Verify containment and process termination`

6. Escalation Requests & Ticket Closure

- **Verify Containment & Eradication:** Request the escalated Incident Response team to verify complete host containment, validate termination of all associated malicious processes/persistence mechanisms, and perform eradication.
- **Request Credential & MFA Reset:** Formally request the SysAdmin / Identity team to force an immediate password reset for every saved credential on `corp-windows-client01` and enforce Multi-Factor Authentication (MFA).
- **Ticket Closure:** Transition **INC0010003** from `Escalated` to `Closed` once verification and reset actions are complete.
